## SUMMARY

I have over 6+ years of experience working in the industry. It was also my task to install and configure test devices and to prepare test plans to connect all user devices. These included administering backup work and evaluating events logs for Windows systems while analyzing applications along with developing improvements in the systems and associated applications. Now I work to maintain system and network security from cybercrime so that they run well.

## SKILLS

- Technical support
- Active Directory
- IT support
- Security monitoring
- Firewall management
- Database disaster recovery
- Computer hardware knowledge
